I'm seeing the exact same problem, but with files as small as 1MB. What I'm seeing is:

1. No reported problems with files less than 1MB.
2. Occasionally hangs on the FTP client (and we use several – IE, WS_FTP, Leech, Macromedia products) at the completion of the file transfer, I would guess about 50% of the time.
3. No error reported on the IIS FTP log, or system error files.
4. If the client is abnormally terminated during the hang, the result is a successful transfer to the server.
5. The problem is relatively recent on an otherwise stable system
6. Microsoft Windows Server 2003, Standard Edition, SP1
