Hi!

when i'm publishing a FTP site with default port (21) & the win2003 firewall is enabled there's no problem.

but when i change the port with some others FTP sites it doesn't Work

<http://egyhost.iespana.es/2003FireWallProblem1.JPG>

<http://egyhost.iespana.es/2003FireWallProblem2.JPG>

by the way: the 2 pictures show you additional settings i made to enable the port to go through the firewall. if there's an additional setting plz tell me.

now .. simply .. what i want is:

to publish(for example): <ftp://196.105.200.100:1960>

& enabling the FireWall on my win2003 server ..

May you help plz ?

thanks  
gracias

.
