Doesn't it say Pure-FTPd from the banner? Doesn't this mean that you're not using the IIS FTP server?

Well IIS FTP does have such a feature, how to use it, I do not know. That was the default. To be exact on what I am using:

Internet Information Services (IIS) Manager  
Microsoft Corporation  
Version: 6.0

This snap-in administers the Microsoft Internet Information Services (IIS)

I get this error message in the event viewer/Security

The Security System detected an authentication error for the server ldap/ftp2.Kilduff.local/Kilduff.local@xxxxxxxxxxxxxx The failure code from authentication protocol Kerberos was "The attempted logon is invalid. This is either due to a bad username or authentication information. (0xc000006d)"

I am using the correct password, I use it to connect via remote desk top

220 You will be disconnected after 15  
minutes of inactivity

Well, you do have a lovely banner msgs.... how do you get the user number  
(1  
of 50) allowed?  
I doubt IIS FTP has such feature.

next, general 530 error indicating login failed, that could due to  
– username/password wrong  
– local policy – access from network, etc not granted  
Error message in IIS: "530 User <Username> cannot log in. Login failed."

In addition – it is IIS 6.0 running on Small Business Server  
2003.

ftp>

And as it said – the logon failed, and it failed with several other

user

accounts too. Also my IP address is in the security directory. Should

I

try

something else? I really appreciate your efforts here.

"Bernard Cheah [MVP]" wrote:

The reason for testing via ftp.exe is to see if your ftp server is working correctly.

I understand you have the order entry program, but now – we need to check if your ftp is working first.

So, go to the remote machine (which allow to connect to your iis server), go to command prompt  
c:\>ftp yourftpserver  
do you see login prompt?, try login, can you upload file?  
post the output here.

The ftp server connection msgs you posted, doesn't look like IIS FTP to me.  
you sure you are using/connecting to IIS FTP?

Yes, I only  
allow  
specific IP  
addresses to  
connect, as  
I did with  
IIS  
4.0.  
My  
clients are  
using an  
order entry  
program  
created in  
Microsoft  
access.  
This  
works in  
conjunction  
with a host  
program  
created in  
the same.  
The  
host  
polls  
the client  
folders in  
the FTP  
root  
directory.  
The Client  
enters  
their  
order,  
hits the  
send button,  
the order  
entry  
program  
then opens  
the ftp  
connection  
using the

Re: IIS 6.0 FTP

clients  
username  
and  
password,  
and uploads  
the order to  
their  
respective  
folder. The  
host then  
pulls the  
order. None  
of these  
clients  
actually  
access the  
site by  
ftp.exe. All  
that is done  
within the  
order  
entry  
program. I  
have looked  
over the  
code within  
the order  
entry – and  
I  
see  
nothing that  
would  
interfere  
with its  
operation.  
Below is  
what  
comes  
up  
when  
I ftp into the  
site. I do  
not do  
much of  
that myself.  
This has me  
at  
a  
loss  
here. They  
all have the

Re: IIS 6.0 FTP

proper  
permissions,  
their IP  
address is in  
the  
directory  
security,  
and yet  
when I  
reboot, I  
have to  
enter the  
syntax

I  
mentioned  
in my first  
post, or I  
get the  
resulting  
error  
message.

This  
really  
has me  
baffled. I  
got that idea  
from a help  
and support  
file in

Windows  
server 2003  
"Article  
293637". It

doesn't even  
say it  
applies to

IIS  
6.0,

but  
I tried it,  
and it  
worked. It  
gives no  
resolution.

Well... this  
is  
what  
comes  
up. Any  
ideas?

What  
if  
you  
go  
to  
IIS  
MMC,  
ftp  
site  
–  
directory  
security....  
remove  
all  
restriction,  
then  
close  
IIS  
MMC.  
restart  
IIS  
service,  
then  
reopen  
IIS  
MMC.  
is  
the  
setting  
still  
there

Re: IIS 6.0 FTP

?

if  
no,  
then  
reboot  
the  
machine,  
does  
the  
setting  
come  
back?
