Errrr..... before we going to solve your AD user issue. just to check what FTP server you using?

From the output you posted –  
220 ServU FTP-Server v2.5n for WinSock ready...  
530 Sorry, no ANONYMOUS access allowed"

this is ServU ftp server and it is configured not to anonymous server.....

you sure you have iis ftp setup and connecting to the correct ftp server?

Next, in step 8, during the ftp wizard creation. the user you specify must be a AD users that have domain access to the AD objects. typically, I will put domain administrators. but not the ftp user.

Hi Bernard,

You must be an IIS god because whenever I do a search for the problems I'm having I always see the name 'Bernard'.

I still can't get this to work.

I've started over (removed IIS and re-installed it).

## Re: Isolate users using Active Directory

Here's what I've done.

1. I've created a user (frodo) with minimal privileges (domain users)
2. Granted 'frodo' local privileges
3. I've created user accounts for Isolated User Access (userA, userB and userC)
4. I've created a folder structure on my F: drive that looks like this:

```
F:\Clients
clientA
clientB
clientC
```

5. Set NTFS permissions on folders where userA has access to clientA, userB to clientB and userC to clientC.
6. Installed IIS/FTP
7. Created new FTP site with User Isolation (option 3)
8. Used 'frodo' as my user in setup
9. Downloaded and ran the tool for setting home directories (nice utility)
10. Successfully ran the adsi commands:

```
adsutil set /msftpsvc/722635/AllowAnonymous TRUE
adsutil set /msftpsvc/722635/AnonymousOnly FALSE
adsutil set /msftpsvc/722635/AnonymousUserName MyDomain\LowPrivUser
adsutil set /msftpsvc/722635/AnonymousUserPass password
```

11. Stopped/Started IIS services
12. Went to my ftp url <ftp://ftp.mydomain.com>

### RESULT

On one computer I get 'Internet Explorer cannot display the webpage'.  
On another computer (the server) I get a popup that says:

```
"Windows cannot access this folder. Make sure you typed the file name
correctly
and that you have permission to access folder.
```

```
Details:
220 ServU FTP-Server v2.5n for WinSock ready...
530 Sorry, no ANONYMOUS access allowed"
```

I can't seem to get past that point. Help!

Thanks,

Rob
