You still depends on basic authentication..... here's few articles for reference.

HOW TO: Set Up an FTP Server in Windows Server 2003

<http://support.microsoft.com/?id=323384>

HOW TO: Limit Access to a FTP Site in Windows Server 2003

<http://support.microsoft.com/?id=816525>

HOW TO: Create a Secure FTP Directory that Uses Password Authentication

<http://support.microsoft.com/?id=239120>

Thanks for the response Bernard. I do need authentication, and was looking to use integrated windows auth, but seeing as that won't work with IIS what would you recommend? I need my users to be able to upload and dowload files from different sites and different systems, security of the folders and files on the site isn't a big concern, but we definately need authentication into the site. Any direction anyone could provide would be great.

Thanks Everyone!

Yes it is possible. but bare in mind that IIS FTP only support basic auth.

In your case, you can either map the ftp folder directly to the web folder
or create a virtual directory at the ftp site and link it to the web folder.

I have a win 2k3 server running IIS and our company
website. I am
trying
to
setup an FTP site for us on the server as well. Whenever I try
the
company
website goes down, and I have to remove the FTP site and
restart IIS
services
to get it back up. I would like to get it setup were it is using
integrated
windows authentication to allow only my users access and to
where they
can
upload/download files. Is it possible to do this on the same
server,
and
if
so, can someone explain how to for me. I appreciate your
help, have a
great
day!
