Try developer groups, IIS ftp support both upload append and download resume.

Hello,

Firstly, I've checked the FTP server if it supports FTP resuming and the REST RETR commands.

I'm not sure if this is the right place to post this, but I can't seem to get WinINet to resume a FTP transfer. I've tried the FtpCommand using "REST" and "RETR", but when the InternetReadFile gets data, it's always at the beginning of the file again...?

Can anyone either point me in the right direction or offer an answer.
