>How can I install and configure the Virtual SMTP server that came with XP Pro?

Control Panel -> Add/Remove Programs -> Add/Remove Windows Components
-> Internet Information Server -> SMTP Service

And it's not virtual...

>I can't find useable directions anywhere. I need to use it to send mail from my own computer rather than my hosts, because my host's cant seem to send email to any hotmail addresses.

Yours is less likely to work than your host's.

>I want to use Email Workshop to send out a newsletter to our readers as well. All I know is that I need to install the IIS Virtual Server as Windows components from the XP Pro CD and set up the server to 127.0.0.1 but that's about it. Help? Thanks

Might ask the Email Workshop folks for help.

Jeff
