Hi,

Have actually asked part of my question in the Sharepoint forum, but it turned out to be more of an IIS question.

The advice I got so far is to:

- (1) create another virtual server in IIS and then
- (2) extend and map (from the Sharepoint Central admin) the new VS to the old one.
- (3) After that, I have been advised to unextend the default web site.

I have attempted (1) but am not sure where to point the new VS to.

Can anyone help me ?

Thanks!
