Hello everyone,

This is the last post I will make before I have to contact Microsoft support. I want to make Frontpage Server Extensions 2002 work with UNC shares in IIS 6.0 but there seem to be one issue or the other with it. Has anyone been able to make Frontpage Server Extensions 2002 work in this scenario? The specifications are:

1. Windows 2003 server
2. IIS 6.0 web server
3. Home Directory on a UNC share located on a windows 2003 server
4. Windows Integrated or Basic Authentication for the Directory Security (whichever works best for now. Eventually I would like to configure windows integrated authentication as the authentication method.)
5. Domain account for the web application pool
6. Domain account for the anonymous user account
7. Domain account to access the UNC share
8. Full NTFS and share permissions for all the related domain accounts on the UNC share.

I have read and followed the procedures on these microsoft documentation.

Deploying and Configuring Internet Information Services (IIS) 6.0 with Remotely Stored Content on UNC Servers and NAS Devices

<http://www.microsoft.com/technet/treeview/default.asp?url=/technet/prodtechnol/windowsserver2003/deploy/confeat/>

Connecting Web Sites to UNC Network Shares

<http://www.microsoft.com/technet/treeview/default.asp?url=/technet/prodtechnol/sppt/sharepnt/proddocs/admindoc/ow>

Nothing seems to be working. Has anyone managed to make FPSE2002 work with UNC shares on IIS 6.0? I would really appreciate it if someone could reply. Thank you for reading this post.
