Jeff,

thank you for staying in touch and helping me.

If you are accessing it by the NetBIOS name, you are probably resolving the name through broadcasts, which won't work outside your LAN. I didn't understand, can you also access it by the IP address as in <http://192.168.1.10/> for example?

– YES, only on my server side itself.

Can you Ping the server's IP of 192.168.1.10 from a workstation?

– YES – from the workstation (the server) by PINGing itself I get the following results:

Pinging 192.168.1.10 with 32 bytes of data:

Reply from 192.168.1.10: bytes=32 time<1ms TTL=128

Reply from 192.168.1.10: bytes=32 time<1ms TTL=128

Reply from 192.168.1.10: bytes=32 time<1ms TTL=128

Reply from 192.168.1.10: bytes=32 time<1ms TTL=128

Ping statistics for 192.168.1.10:

Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),

Approximate round trip times in milli-seconds:

Minimum = 0ms, Maximum = 0ms, Average = 0ms

... and from other workstations is says timed out and 100% packet loss.

I have just informed you about my Firewall is turned off, since I have some blockade to my server that has to be found.

1) Show the results of a ping of the router (192.168.1.1) from the server (192.168.1.10)

```
C:\>ping 192.168.1.1
```

Pinging 192.168.1.1 with 32 bytes of data:

Re: Can not access my IIS 6.0 web page inside and outside the LAN

Reply from 192.168.1.1: bytes=32 time=2ms TTL=64  
Reply from 192.168.1.1: bytes=32 time=1ms TTL=64  
Reply from 192.168.1.1: bytes=32 time=1ms TTL=64  
Reply from 192.168.1.1: bytes=32 time=1ms TTL=64

Ping statistics for 192.168.1.1:

Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),  
Approximate round trip times in milli-seconds:  
Minimum = 1ms, Maximum = 2ms, Average = 1ms

2) On the server (192.168.1.10), go to a command prompt and type:

```
IPCONFIG /ALL
```

```
C:\>IPCONFIG /ALL
```

Windows IP Configuration

```
Host Name . . . . . : webmap  
Primary Dns Suffix . . . . . :  
Node Type . . . . . : Unknown  
IP Routing Enabled. . . . . : Yes  
WINS Proxy Enabled. . . . . : Yes
```

Ethernet adapter Local Area Connection:

```
Connection-specific DNS Suffix . :  
Description . . . . . : Realtek RTL8139 Family PCI Fast Ethernet  
NIC  
Physical Address. . . . . : 00-50-FC-5E-4C-06  
DHCP Enabled. . . . . : No  
IP Address. . . . . : 192.168.1.10  
Subnet Mask . . . . . : 255.255.255.0  
Default Gateway . . . . . : 192.168.1.1  
DNS Servers . . . . . : 193.189.160.11  
193.189.160.12
```

3) I've forgotten, what version of operating system is the server?

```
Microsoft Windows [Version 5.2.3790]
```
