Happens when I am the only one on the network, and I am hitting a page from a local web browser. After a reboot it starts out fine, but after several days of people hitting the ASP pages the performance starts to go way down...it just seems odd that for 2 years it was fine then the upgrade to IIS 6 seems to have degraded my performace so

microsoft.public.inetserver.iis: Re: Win2003/IIS 6/ASP/SQL Thrash hard drive on queries

baddly. I also have several ASPX VB.NET pages...I ahve not noticed it in them.

Ed,
