Hello,

Apart from the check Doug mentioned, please do the following:

- 1) Test the asp page in Low isolation (right click on site in IIS MMC-> Home directory tab-> Application protection). If this works, then there is most likely a problem with the IWAM account or the COM+ catalog.
- 2) What is the error message in the browser when you browse a simple asp (be sure to turn off friendly http error messages in IE)
- 3) Any errors in the Event logs?
- 4) Check out <http://support.microsoft.com/default.aspx?scid=kb;en-us;309051>

Thanks,

Yogita Manghnani
