Can someone help me connecting to IIS 5.0 remotely.

I've searched google groups and found some articles but none described my problem. I tried some of the solution proposed in other article but it didn't helped.

I have a IIS 5 server in our DMZ
Im trying to connect to it with IIS MMC snap-in.

When I add the computer 10.10.100.3 (internal IP)
It appears in the snap-in with no error, but..
when I click on the server, there's nothing.
I can't see our web sites, nor our ftp sites.

This computer is not part of our AD domain.
I created a similar user on the server as
my AD user. (same login and pass)
But it didn't helped.
I also added this user to the administrators group
with no luck again.

I wish I had an error message but I cant find one.
I also checked the event log on both machine but found
nothing.

Please someone help.
