Thanks for your reply

How many hits do you expect to be getting per day seems to be the main criteria.

(Assuming advertisement on radio and television quite a few.

Not really sure.)

If your content is mainly static (yes it is) then your hardware could easily handle the 100 000 plus setting.

(this would be connections correct?)

I would not bandwidth or CPU throttle either, unless there is some compelling reason to do so.

(This left on the unlimited setting Correct?)
