You can use URLScan to disallow .EXE from being accepted by the server on the URL (which disallows both requesting EXEs as well as uploading EXEs). Otherwise, there is no generic feature for any web server to disallow the upload of one file extension but not another. HTTP does not define an "upload", and custom web server extension can implement "upload" in arbitrary manners.

Thanks in advance for any usefull replies.

Environment:

Win2k, 2000 FPSE, Intranet

Question:

Is it possible to disallow web editors from uploading .exe files to the content directories, and still allow them to go about daily content (.asp/.html) updating.

Editors use Frontpage 2000 or 2002.
