Hello Martin,

Have you tried running the application in Low isolation (Website properties-> Home directory tab-> Application Protection)? It is very likely that you will be able to browse ASP Pages in Low isolation.

What happens when you go to Administrative tools-> Component Services-> expand Computers-> My Computer-> Com+ Applications? Do you get any errors? Or does the MMC hang?

If yes, then it could be possible that COM+ catalog is corrupt. To repair it follow the steps in

<http://support.microsoft.com/default.aspx?scid=kb:en-us:301919>.

If the Com+ MMC shows you all the COM+ applications, can you see the IIS In process Applications and the IIS Out of Process application packages? if these are missing you will need to re-create them by running the command: "rundll32 wamreg.dll, CreateIISPackage" from C:\winnt\system32\inetsrv at command prompt

Restart IIS, reopen the COM+ MMC and confirm that these 2 packages are present

Switch to Medium or High application protection and confirm if you can browse ASP pages.

Hope this helps!!!!

Thanks,

Yogita Manghnani
