I have no idea what "IIS Lockdown" tool from 1997-98 you are referring to.

The IIS Lockdown tool that you just downloaded is the one that just about everyone refers to. It was released around Oct 2001, right after Nimda/CodeRed. It targets IIS4/5/5.1 and is completely unnecessary for IIS6.

No, I have a copy of the IIS lockdown tool (from 1997-98) which I used
on IIS4 here which for instance does not have a devent rollback system
and in is NOT the same as the one I just downloaded from MS a few mins ago.
