I have a laptop where I have Win XP pro, IS 5 asp .Net 1 and 1.1, VS 2002 and 2003.

this morning I tried to browse one of the we sites I developed on my server, I got a message indicating that I have no .Net setup on my machine.

I opened the IIS mmc, and for the first time I see the the node myMachineNem(LocalComputer), clicking on it, everything disapEared (web sites, smtp , ftpservice,)

I opened the service sheet, saw WWW service has not started, i ried to start it, I get the following error essage : Could not start the WWW Publishing service on local computer. Error 3: The system cannot find the path specified.

What could have done that ? I wondered what path is not found? IIS ADMIN service above

has Running status

I re-run IIS setup on my machine. kaunching html pages work fine, but when I launch an asp or asp .net page I get teh folowing error

"Server Application Error"

I noticed that Error ID = 36 is reported in my event viewer with the following description :

"The server failed to load application '/LM/W3SVC'. The error was 'The specified metadata was not found.

'."

After looking on differnet web sites and reading some good articles especially on aspfaq.om, I discovered that MSDTC service doesn't exist anymore in my services

I understood I should launch the dtcsetup. Where can I find this exe and how should I proceed.

Thanks for yor help
