I am trying to export a certificate from one iis 5.0 server to another, I have followed the instructions on the following articles:

Backup:

<http://support.microsoft.com/default.aspx?scid=kb:en-us:232136>

Restore:

<http://support.microsoft.com/default.aspx?scid=kb:EN-US:232137>

1. The backup procedure produces a file type .pfx
2. The restore procedure asks you to look for a .key file
3. I have tried the restore procedure with the .pfx file that is produced and it errors with: Cannot import keyring backup file, either you entered the wrong password or the certificate has expired.

Well I entered the right password and the cert hasn't expired. Does anyone have experience of doing this and can they help?

Many thanks.
