Thanks for the reply, Ben.

Yes, the W3SVC13 directory exists and the app pool runs under an admin account.

Monday, I changed the schedule of moving the IISlogs to run weekly vice daily. Since then, the errors have disappeared. But, they will reappear once the log files are moved in the weekly schedule.

Regardless, the logfiles are still created and logging still occurs. I just want to know why I get the http errors and how do I get rid of them and still be able to move the log files to another location.
