David, Here is an update: I can NOW get to the protected web site from a domain computer when I am signed into the domain BUT when IE accesses the web the user is prompted to log in. My reading of the document says that an authenticated user should not be prompted for new creds. The log follows.

I found the policy that was only allowing Guest, and Guests to access the computer remotely. I added Everyone to get where I am now. Do I need to add Authenticated Users to get where I want to go?

Thanks...Chuck
