Hello,

Please refer this KB article and make sure you have set default user rights and permissions.

812614 INFO: Default Permissions and User Rights for IIS 6.0

<http://support.microsoft.com/?id=812614>

Also you could try and check following:

- 1.Enable auditing and track failure events.
- 2.Find out access denied errors by using with filemon and regmon from www.sysinternals.com
- 3.Check event logs.
- 4.Is the application pool running under network service?
- 5.Check local security policy for denied setting or follow the above article.

HTH.
