I probably wasn't clear in the original post (it's a weird issue)...

The Yahoo user doesn't get the registration email from my forums, so to diagnose it I;

Used my own personal computer to send the email to his Yahoo address using the same account – and he gets it.

What this showed was that Yahoo is not blocking the domain nor the email address itself. So I guess the question

I had is – why doesn't he receive the email from my forums?

The vast majority of other users get the emails. I don't get an NDR report for the email going to the Yahoo domain and I know the mail is going out. If Yahoo is not blocking the domain or the individual address then why is the mail not delivered?

But when I use my home computer to send through the very same mail server, using the same account and reply to address – he get's the email.

Pretty weird eh?
