I've been using 5.02 on a mac 8600/300 under OS 8.6 for 2 years
I have 4 identities on it me, son, etc
Yesterday as outlook opened up on my account I got the message
"could not open that feature. Error has occurred (-127).
...I suppose that's internal file system error...

In the relevant identities folder I have tried duplicating the database
file (3MB) and the Messages file (64MB) and get the error message..
"the item messages cannot be read because a disk error occurred do you
want to continue"...I click OK and no copy is made..

When I click <option> on firing express to rebuild I get...
rebuilding failed an error has occurred (-127) etc

Outlook works OK with the other identities....
Can anyone suggest what I can do to try & get back my messages and
addresses?
