My previous OE5 on OS9.2 started crashing this week, so I deleted it except for mail and address folders. The new OE5 I downloaded today still crashes midway thru loading, with an Error 2 or 3 message. I have plenty of memory, and even tried it with extensions off and it still crashes. Ironically, if I open it from OSX within Classic 9, it opens fine but into a new file with no addresses or stored mail like it has when opened in OS9. But the bottom line is that I have to get it working again completely in the OS9 environment.

Can anybody shed some light on this? I really need to get OE5 running ASAP.

Thanks.
