Almost all Radius compliant clients are supported in IAS, most of Cisco hardware are also supported including AS5xxx and Access points

Additionally, IAS is able to authenticate users from the Local SAM account and from Active Directory (the later is encouraged more for centralized user management, and many other advantages)

To read more about IAS and Radius clients check..

<http://www.microsoft.com/VPN>

<http://www.microsoft.com/wifi>

Fore additional IAS Specific info :

[http://msdn.microsoft.com/library/default.asp?url=/library/en-us/dnanchor/html/anch\\_ias.asp?frame=true](http://msdn.microsoft.com/library/default.asp?url=/library/en-us/dnanchor/html/anch_ias.asp?frame=true)

If you face any issues, please post back to this news group and everyone here from Microsoft and MVPs would be glad to help you

Hth
