

IMAP vs POP affecting database size

Source: <http://www.tech-archive.net/Archive/Mac/microsoft.public.mac.office.entourage/2004-06/1743.html>

Will storing messages on an IMAP server help to keep the size of the database down much? Or is any difference negligible? I have some rather large POP boxes and am thinking of moving them over to an IMAP server (with future messages to be sent to the IMAP account as well).

TIA.

PS How does one set up an email address for news postings in Entourage that cannot be harvested?
