This appears to be a great update overall -- very much appreciated! One issue, though:

When I go to add a delegate, I get a dialog box that says:

Entourage cannot use a secure connection to set delegate options. While setting delegation options, Entourage is temporarily unable to use a secure connection with your Exchange server. This will not affect any existing security settings.

Upon trying to continue, I'll get an error:

Entourage cannot connect to the Exchange server. Verify that your Exchange account settings are correct. (Error: 277)

I'm using Entourage 2004 SP2 (of course) with Mac OS X 10.4.2, in an Exchange Server 2003 environment that, as I understand it, is configured to not accept any non-SSL/port 80 connections.

Can anyone shed any light on what is happening or how I might get this feature working?

Thanks.
