Recurring events created before the upgrade to 11.3.4 still exhibit the wrong time during the 3 weeks from 3/11/07 to 4/1/07. Updating the existing series does not correct the problem.

Recurring events created after the upgrade to 11.3.4 work fine.

This suggests that we have to delete every recurring meeting created before the 11.3.4 upgrade and replace them in order for the times to display correctly.

This creates many issues in a large organization where many different people schedule meetings. We can't just delete and resend all the 30 or so recurring meetings for each of thousands of users – that's thousands of separate recurring meetings that must be recreated.

I thought MS said they had fixed this problem.

If your events are on an Exchange server then that means your Exchange Server admins have not yet patched their Exchange Servers.

Part of the patching process will be to run a utility that will essentially alter all calendar events in every account by one hour. Any meeting invitations you have received and accepted will be resent to you and you'll need to reaccept them.

If the above describes your situation then do not alter your events' times. They'll be wrong after the server patching.

Hope this helps! bill
