However, if I edit a contact in Entourage or Address Book, the changes are not reflected in the other application.

Do you have Reminders turned on? Spotlight will index any cache files the Entourage daemon has created even if the daemon is not launched, but no new cache files will be created until the daemon is launched again. If the Microsoft Sync daemon never launches, there's no way for Entourage to sync data with Sync Services. The preferences in Entourage for Sync Services basically control 1) if this daemon app is launched and 2) where it should sync data to-from.
