That one turned out to be a corrupt document, produced by a corrupt Normal template, possibly created by up-converting a heavily-customised Normal template from Mac Word 5.1.

More in the "File Conversions: A Heads-Up" thread...

Send me a sample of one of those documents. I need to see what character codes are actually landing in the text. I had a similar problem myself, without any non-English languages or fonts involved, so I am chasing this one.

Put the password "90@p10g2000cwp" in the subject line or you'll get dumped by my firewall, and attach the sample as a Word .doc.

Cheers

You might have a look at the Word language and Mac keyboard language settings on your machine. The bizarre format of your news posting

from

your 'vBulletin USENET gateway' makes me suspect that not

Re: Word 2004 bug: hyphens that don't break

all is

well.

(I see little forward delete symbols where I'd expect line ends
in

your

post. Not everyone will see it that way. It looks fine in
Google
Groups.)

A. Sparling replies:

Dunno where you got the funny colors from. I just typed my reply into
the box on macosx.com in Safari.

Keyboard is US extended; Word language setting is English US. But it
doesn't change if I assign a different language, either.

Please reply to the newsgroup to maintain the thread. Please do not email
me unless I ask you to.
