Good to hear, Ben!

Elliott's comment, with a mere suggestion of mock-heroic Shakespearean, "You seem to have blundered into Word for Macintosh by mistake. What *is* this RightClick of which you speak?" was a gentle fun-poking at Mac users, some of whom still use one-button mice despite the fact that Microsoft products in particular are so much more accessible via right-clicking (they use Ctrl-click instead).

See what you get when you stumble on a Mac newsgroup? Here be strange folk... ;-)

Cheers,
Clive Huggan

Your (and others) response pointing me to "HTML paragraph spacing" was exactly the answer I was looking for. There are several other check boxes under Tools>Options>Compatibility that I will be taking advantage of as well.

Regards,
Ben W

BTW, RightClick is the "right" (or secondary) mouse button for us Windows abusers.

Re: spacing between paragraphs: before+after vs. max(before,after)

You're correct: the setting is the same (Under Tools>Options>Compatibility...) in Word 2002.

HTML paragraph spacing rules applies the "highest" of two spaces between two paragraphs. "NOT" using it is the setting he wants, which applies the "sum" of both spacings.

Cheers

FYI, we are still using Word 2002 here. Now for my issue, which I'll relate through the following experiment. Let's say I have a short Word document with the following three lines (all in Normal style):

First
Middle
Last

Now I select all three lines (Ctrl-A), RightClick->Paragraph..., set Spacing Before=6pt and After=6pt, OK. In some documents the result is that there are 12pts of space between "Middle" and "First" and, likewise, between "Middle" and "Last" (i.e., 6 + 6, the sum of Before & After.) Sometimes (never in the same document, but in another document) the experiment yields spacing is only 6pts between "Middle and "First" or "Last". In documents with this latter behavior the spacing is always the greater of

Re: spacing between paragraphs: before+after vs. max(before,after)

Before or After.

Is there some "secret" attribute in Word that makes it behave one way vs. another. This has driven me nuts for years. BTW, I LIKE the first behavior.

You seem to have blundered into Word for Macintosh by mistake. What *is* this RightClick of which you speak?

In Mac Word 2004, it is controlled by the preference setting "Don't use HTML paragraph spacing". I think "don't" means add the spacings.

That might translate into Word for the Dark Side somehow.
