No, it's not a known bug. Did you reboot since updating? A reboot might fix it: your system has lost the association between the .doc file type and the Word executable.

If that doesn't fix it, use Open With and Change All in the Finder to re-establish the association.

Cheers

In Column View in Mac OS 10.3.9 I used to be able to launch Word docs by double-clicking the Preview icon. However, recently – I believe since updating Office to v. 10.1.7 – this no longer works. Is this a known bug?
