Hello again.

Thanks for the quick responses...all of you.

I actually have tried trashing the Normal template file a few times (sorry I didn't list that originally). And then when I did the full uninstall/reinstall of the Office Suite it trashed and created anew again.

I will try to create a new user and see if that entity suffers the same non-typing fate. Also the "reapply the Combo Updater" sounds like a good idea too.

I will keep you all posted as to the results.

Any other ideas or thoughts in the meantime is always greatly appreciated.

'til then,

michael
