

Equation Editor uses the wrong symbols

Hello,

I was using Office X and I found that when I selected the symbol for a dot over a character, it put an intersection symbol over the character instead. Two dots become two intersection symbols, and three becomes three. Most of the other over-character symbols are okay, but a hat is a cursive symbol and a tilde is a circle with an x through it. I have never run into this problem before today (I have put dots over characters before with no problems). It was about time to upgrade Office X anyway, so I bought Office 2004, uninstalled the old version of Office and installed the new one. I am having the exact same problem.

Any ideas why this only started happening today? Any idea why uninstalling office (and equation editor) and installing the new version of office (and equation editor) did not solve the problem?

I have AppleWorks on my computer as well. It has its own Equation Editor that looks like an old version of Word's equation editor. Dots over characters work perfectly there.

Any help would be appreciated.

Thanks,
Matt
