I'm sure John will guide you well in the use of Word tables, but I'd suggest that you do something like this in EXCEL instead. You'll have far fewer restrictions, more facility for efficient data entry, far greater data management capabilities & still be able to merge the data back into a Word document as a List, a Catalog, or labels.

You might have a look in File> Project Gallery> Ledger Sheets – Lists for some ideas.

I have a 3-column table with 102 rows and I need to add at least 30 more (I'm creating an inventory of my, rather extensive, CD collection). I selected the same number of rows as the number I wish to add, but the command just isn't there – neither in the 'Table' menu, or via the right mouse button menu (I use a Logitech rodent). The 'add column' command is also missing and I'd rather like to add another couple of columns, too.

Is this a bug, am I doing something wrong, or isn't it possible for a table to have more than 102 rows (if the latter is the case, it does make it rather pointless, as I would have thought that tables with an – almost – infinite number of rows could be created)?

Someone help me out here!
