I'm seeing the same behavior with Version 11.1.0 on Mac OS X 10.4.2 on a 12" PB with 1.25GB RAM and 1.33GHz G4.

When I see it is usually after I have quit Word and Word has gotten stuck. I have to force quit both apps. Usually the regular "Force Quit" works, but I have used Activity Monitor in the past to kill the process.

John

(So, we have no way to report bugs either directly or indirectly to the Mac BU? Come on folks: we're your dedicated user base here.)
