Hi again,

So you and Erik have something in common that is different from me and is causing the bad behavior.

What could it be? I've got ATI Radeon X1600 graphics. 2 Gig Ram, but your 1.5 gig should be plenty. I have no idea....

Well Jim, here ya go :)

PM G5, Dual 2 GHz, 1.5 MB
OS X 10.4.10
Office 11.3.7

Same problem as reported by the OP. No matter what I do the right chart doesn't appear in the Word image. I've tried just about every combination I can think of involving:

Use of the Select Objects tool from Drawing toolbar
Grouping
Arranging
Eliminating overlap of elements
Standard Copy command (as opposed to Copy Picture)
Paste Special options in Word

Although straight Copy/Paste **does** bring everything over, the charts look fine but the text boxes are all improperly sized & some lack a portion of the content. All this despite the fact that all looks good on the clipboard.

The only thing I've found as a workaround (other than using Grab to take a screen shot) is to save the selected content as a Picture, then insert the

Hi Erik,

As soon as I turned on my computer this morning I was prompted to install the 11.3.7 update, so I did.

Then I tried the same thing again, but to no avail. I still don't reproduce the problem. Our hardware is very similar, so it's probably not that, although it's not identical so we can't completely rule hardware out.

Are you running any "haxie" programs (things that enhance how MacOS behaves)? Are you running any anti-virus software? If yes, please try turning them off temporarily to see if the problem goes away.

I'm grasping at straws here, so I hope someone else jumps in on this thread and finds a way to reproduce the problem.

Hi Erik,

I tried to reproduce the problem on my Intel
iMac, but was not successful.
Every copy I made was good. I did not see
any unexpected white areas.

Was this using the sbug.xls file that I posted the link to? It
occurred to me that the problem might be related to this
being a file
created in v.X ... but then I was just able to reproduce the
problem

Re: Paste Picture from Scrapbook, Office 2004 for Mac
in file created by Excel 2004.

So let's be sure we're on the same page. Do you have the same version installed that I do? I have all the updates. When I check the version of Excel using the menu Excel > About Excel it says I am using version 11.3.6 (070618). If yours says something different then use the Help menu and check for updates. If yours is the same, then maybe it's hardware related. What computer and display do you have?

I did make sure I was updated, and am at 11.3.7.

I'm on an Intel Core 2 Duo MacBook Pro, 17" high-resolution screen (a couple of weeks old).

A workaround seems to be to print the marked region to a PDF, open that in Adobe, export to TIF, and paste that. Not so elegant, but may suggest that the problem is not hardware.

Office v.X is still installed, since I migrated my account and applications from the G4 tower I was leaving. Any stories of v.X and 2004 conflicting with each other?

In any case, many thanks for having a look.

Erik.
