I recently purchased a 17" PB 1.5 Ghz @ 1 Gig RAM on the assumption I could use VPC 6 (Stand Alone Edition) to wean me off of PC applications as I have a considerable investment in software. I was wanting to use Win 98SE (smaller footprint, lighter on resources) over XP. However after following Microsofts own instructions (See <http://support.microsoft.com/default.aspx?kbid=824365&product=vpcmac>) at point # 15, I get a monochrome box with the error message, OS NOT FOUND. INSTALL AN OS ON THIS HARD DRIVE. I have tried variations on the instructions including installing Win 95, Win 98SE, Win ME and Win XP to no avail. ONLY Win Xp loaded. Can anyone see what I am missing?
