I was about to purchase VPC 7 but luckily checked on Tiger compatibility. I need to run some XML/XSLT programming and other standards-based software. All of the files and executables will be resident on my computer; I don't anticipate needing any network resources. Has anyone encountered software that refuses to work (or works on a limited basis) under Tiger? As long as everything is running in my own environment, I shouldn't have a problem, right?

Thanks,
*jdt
