i am trying to join my school's domain so i need to use VPC 7 to join in a domain so i followed the steps in Microsoft knowledge based ID 824440 -You Cannot Log On to a Domain or Connect to a Network from a Windows-Based Virtual Machine:

the instructions are as follows:

Use Virtual Switch

To use Virtual Switch with your Windows-based virtual machine, follow these steps: 1. Start Virtual PC.

2. On the Virtual PC List, click the virtual machine that you want to configure.
3. Click Settings.
4. Click Networking.
5. Click to select the Enable networking check box.
6. Click Virtual Switch.
7. Click OK.
8. On the Virtual PC menu, click Preferences.
9. Click Virtual Switch.
10. Click one of the following options in the Select Ethernet Adapter list:
 - (Default)
 - Built-in Ethernet
 - Ethernet Slot
 - AirPort
11. Click OK.

but 10. there is suppose to be an option airport under the select ethernet adapter list. i only have 2 options, Built-in Ethernet and Ethernet Slot but airport is not present. my ibook has built in airport and when doing this airport is turned on, and i tried turning on and off but VPC still do not detect my airport. without this according to my school's network adminiartor, i can't connect to the VPN and the school's network.

can any one help me on this?

airport option missing from VPC 7.2 Select Ethernet Adapter list

i am currently using ibook G4 1.33GHz with 1GB ram and built in airport and bluetooth, operating on OSX 10.4.2

VPC is in Version 7.2 and i have updated the necessary soft ware

Thanks in advance for the help
