Is it possible to upgrade Windows from within Virtual PC?

I just purchased VPC 7, expecting to load XP, forgetting that my XP disc is the upgrade disc rather than the full-install. Of course I have Win-ME – can I use that and then upgrade my Mac to XP? If so, how do I do it?

Start the installation with the XP disc, eventually you'll reach a point where the installer asks for proof of a previous version, eject the XP, and insert the ME disk, then follow the rest of the on-screen installation instructions. After XP is completely installed, don't forget to install the VM Additions.
