

Windows won't shut down inside VPC

All:

I run VPC 7.02 on a PowerPC iMac 1.6 mz., running OSX 10.4. I just use VPC to run Quicken Delux 05. That's where the problem began....

I started up Quicken this morning, and for some reason, it got hung up on the opening screen. No problem, I thought, so I went to the Windows task manager and tried to end Quicken.

Nothing happened.

Time for plan B: I tried to shutdown/restart Windows within VPC. That worked only to a point. Windows started the shutdown process, but now it appears to have gotten hung up, too, half-way through the process, with the Windows taskbar unavailable. Hitting control-alt-delete does nothing either.

Any idea what I can do? I tried saving and restarting VPC, but that only saved the stalled Windows shut down. I don't want to reinstall Windows in VPC and really need to save my Quicken data.

Many thanks for your help

Mark
