Thanks for your request -- but to date there are more questions/less answers. If I plug my cable from the tuner card into MIC (instead of Line In) I get full volume but still have the problems with left/right channels not working right. So this is what I do ONLY for encoding and streaming TV to my laptop or PPC where stereo sound isn't important. Other files as wme input work fine (but obviously they are not using the same audio in).
