Error C00D0029 or "The connection to the server has been lost" means just that. This can happen for many different reasons. Your internet connection might be temporary chocking, the server with the content you are trying to access may have too many other people at that point, or many other things. Trying the link again later is always a good troubleshooting method.

If you keep running into this error you will want to provide the following.

- What's the link to the content?
- What version of WMP & what OS do you have?
- What do your Network settings look like in WMP?
- What type of connection and what ISP do you have?
- Do you have a firewall running?
- Does this occur for all web based content, or just some?
