Hello Oliver.

I feel your pain and I hope the moderators read our posts and get us a patch &/or a Hotfix for this. These issues should have been resolved in the Beta stages and it really makes me furious that MS would place this SP2 into RTM when there is more bugs than an apartment in NYC infested with roaches.

I thought MS would have learned with all that happened with the DOJ but I can tell you this, If Microsoft does this with Longhorn, It looks like LINUX from here.
