Given that it's a beta, there is likely no solution until a later beta or the release version.

billapgh wrote:

Is there any new information on this problem? Unfortunately I have been using winamp to play music as WMP11 is useless for at least half of my music collection.

Thanks,
Bill

"JeffsterL" wrote:

Hi,
I'm Having same problem. plays WMA"s created/ripped with media player fine, but wma's created with roxio EZ CD Creator open, begin to play, no sound, then after a few seconds, go to the next track.
These files play correctly with any other program, i.e. real audio...
I have I.E. 7 also

That's very interesting. Could both of you open WMP's
Help>About menu, then select "Technical Support
Information", and then paste or other make available the
HTML/list you get there? I'm curious if you have something
loaded here that is stepping in the way of WMP working
properly. =\

Thanks,
-Zach

Yes both my machines have the same
software configuration but the hardware is

Re: WMP11 stops playing files that played fine in wmp10

different. The home Dell Inspiron 8200 is over 3 years old but dxdiag gave no errors. The office Optiplex GX280 is less than a year old. Some more information –

In 2004 I converted my entire media library using the Plus! audio converter to WMA to save space. Those files play fine. The problem occurs with the files that I have converted in the last one year using the Plus! audio converter after Plus! was updated. The 8mbps bitrate is a result of that conversion. The older files were all constant bit rate. The newer conversion was from fixed mp3 to WMA variable bit rate. I do that because I have come to realize through experience that VBR is just a more optimal way to encode your music. The files that I ripped directly from a CD using WMA VBR also play fine. And yes I tried uninstalling WMP11 and IE7 from my Optiplex and then reinstalled WMP11 to get the same result. So it happens with IE6 also. I think there is something special in the file format itself.

Thanks for following up on this problem for so long.

Mangal

"zachd [MSFT]" wrote:

Hm – I tried this again (see sig) on my home computer and it again worked fine.

Do both machines have IE7... ? I would be curious if this happens for anybody *not* running IE7... I wouldn't think IE would interfere here, but that's the chief difference right now between my machine and yours.

Re: WMP11 stops playing files that played fine in wmp10

How old is your Dell? Dell shipped various buggy sound card drivers at one point, so you may want to check your sound card manufacturer from an update – that fixed my Dell last year after I bought it. =\

Does dxdiag.exe report any errors... ?
