Is the file ac3filter.ax on your system?

What is listed by WMP's Help>About:Technical Support Information menu tool?

Clogs are awesome, as are stroopwafels.

Speaking for myself only.

See <http://zachd.com/pss/pss.html> for some helpful WMP info.

oh my god... i hate this! since januari i have Vista and before that 98.now in Vista i can't remove wmp anymore and re-install it.my wmp doesn't play mp3 and wma files anymore.it tries for a few seconds,but with no sound.no error messages.doesn't matter what bitrate or cbr or vbr.but it does only plays wav now...but i have nothing changed! and it used to play the files just fine!the files are not corrupt,because i can still play it with other players,such as Nero.but i wanna use wmp for all my files,like i always did.i had this problem once in windows 98 SE.but then i re-install wmp and install it again and than it worked just fine again.but now i have Vista,build in in an Acer PC.so maybe i have to wait for an update from Microsoft,mediaplayer 12 maybe?
:) my english is maybe not perfect,but i am from the Netherlands,and i am typing this with my wooden shoes on while i am eating cheese... :) maybe someone knows what to do with this problem,maybe experienced it by himself? i hope so... thanks anyway!

Hi,

I'm running Vista Ultimate and WMP does not work anymore.
When I try to play an mp3 file nothing happens, WMP doesn't even
open.

How can I reinstall it?

Thanks in advance,
Paul
