Can you tell us what version of Windows Media Player you're using? I don't recall a viz called "critter rock" what version of WMP did you use it in?

Thanks!
Mike Poz [MSFT]

I checked my WMP11, and it indeed contains a critter rock visualization. I don't know if WMP automatically retains old selected visualizations on upgrades. If it does, critter rock could have come as early as WMP 8 or 9. On my WMP 11, it is at:

click Now Playing > visualizations > musical colors > critter rock(near the bottom of the menu)

Hopefully this will help you answer the question asked.

.
