Okay..I understand creating playlists, but when I try to consolidate the media files (mp3s) into an album, add the artwork and all that....I'm running into problems...like I will "queue" up all the songs that belong in the album...which I understand should be automatically added to "recently added". But that doesn't happen!
the music files are not there.....or are hidden somewhere else

I mean it says "10 items queued for playback" and then I assume you're supposed to be able to play them back and they are automatically added to your library (according to the instructions) doesn't happen !
Total frustration!!

It'd be great if you could take the playlist you've created for the album and just drop it into the album mode and add all the art work and other media INFORMATION. I thought that's how it's supposed to work...
Help!
